

Entrust Certificate Renewal Instructions

Ask Jose for the list of Servers and Passwords to Remote to the Servers.

1 - Generate new CSR:

For Windows, you must do the following:

- Open IIS, right click on the default site and select properties
- Click Directory Security, Server Certificate
- Select the Renewal option in IIS and complete the wizard

2 - Login to your account, select the renew option to renew your SSL certificate.

Complete the renewal form. Replace the CSR in the form with the new one you create and set the expiry date. When you have completed this, your new certificate should show up as READY.

3 - Install the L1C Chain certificate:

Get the Cross certificate by clicking the cross certificate tab. Copy it into a .cer file.

To install it, you can follow these guidelines:

<http://www.entrust.net/knowledge-base/technote.cfm?tn=7566>

4 - Install your SSL certificate

Get the SSL certificate by clicking the Webserver Certificate tab. Copy it into a .cer file.

To install:
